COMMENTS This ISO 46-grade hydraulic oil had slightly elevated levels of iron and copper. With more samples we will be able to tell if these levels are normal for this press, but for now we don't think iron and copper are high enough to warrant an oil change. The trace of insolubles shows light oxidation of this oil and for this we suggest filtering the oil, if possible. Keep this oil in place and check back in 6 to 12 months for another look.

ELEMENTS IN PARTS PER MILLION	MI/HR on Oil		UNIT / LOCATION AVERAGES						UNIVERSAL AVERAGES
	MI/HR on Unit
